Description of the application

The goal of this project is to create an application capable of displaying different information about movies and television series. The application is going to contain different web pages such as: landing page, login page, multiple pages related to the content such as reviews and recommendations, contact page, site map and the general information about myself.

Actor 1: Admin

The admin has access though both the website and the desktop application. His purpose is the add the movies and tv series to the website, create the reviews, see the recommendations that were sent to him and mark them as completed or not. The admin can delete comments through the desktop application or hide them from the website, he should be able to ban users from the website.

Actor 2: Viewer

The Viewer can sign up/log in through the website, retrieve and see the information available about the movies, tv series and reviews. After logging in on the website he can leave likes, dislikes and according to those he gets personalized

recommendations. He can leave comments and delete his own comment. He can update information about himself such as email address and phone number and he can see the history of his likes/dislikes and comments.

Site map

- Top 5 tv series
    a. -dummy series 1
    b. -dummy series 2
    c. -...
    d. -dummy series 5
- Top 5 movies
